## THE BENEFITS OF LASER TONING

PIGMENTATION OF THE skin is a struggle for many, especially for those with darker complexions. Laser toning is a treatment that helps improve the quality of the skin's dermal layers by using a gentle heating action to improve your skin's tone and stimulate collagen stores.

It is less invasive than fractional resurfacing or having a chemical peel and typically requires less (or no) downtime after the procedure. If you want to reduce or delay the signs of ageing or help extend the benefits of other treatments, then laser toning is right for you.

The other benefits of laser toning include minimal discomfort, quick treatments and the opportunity for all skin types to be treated.

Laser toning can be used in conjunction with home topical applications of vitamin A, B and C serums, along with in-clinic IV-infused vitamin C and glutathione.

We are now offering this full laser toning treatment, including IV infusions at Cosmetic Image Clinics.
